Founded in 1996 by knowing Bhatia and Jack Smith as Hotmail, which was acquired by Microsoft in 1997 to about 5 400 million and relunched as MSN Hotmail, later renamed Windows Live Hotmail as part of Windows Live product set. [1] Microsoft deleted Hotmail in October 2011, [3] [4] [4] [5] Release the service such as Outlook.com in 2012. History Release the Hotmail Hotmail Service was founded by Know Bhatia and Jack Smith, and was one of the first webmail services on the internet along with Four11 rocketmail (later Yahoo! Mail). [6] [7] was commercially launched on 4 July 1996, symbolizing the "freedom" of ISP-based e-mail [8] and the ability to access the user's entry box from any place of the world. The name "Hotmail" was chosen among many possibilities that end in "-Mail", since included HTML letters, the label language used to create web pages (to emphasize this, the type of packaging Original was "hotmail"). The limit for free storage was 2 MB. [9] Hotmail was initially supported by the risk capital firm Draper Fisher Jurvetson. In December 1997, he registered more than 8.5 million subscribers. [10] Hotmail initially worked under Solaris for FreeBSD Mail and Apache Services for Web Services before being partially converted to Microsoft products. [11] [12] Using Windows Services for UNIX on the Migrain Path Q. [13] MSN Hotmail A 2001 Hotmail Embedded Layout Inbox In Microsoft Outlook The old MSN Hotmail input box from 2007 Hotmail was sold to Microsoft in December 1997 by supposed US \$ 400 million, and joined the group MSN of Services. [14] Hotmail quickly gained popularity as he was located for different markets around the world, and became the world's largest webmail service with more than 30 million active members reported in February 1999. [15] Hotmail Originally worked on a mix of FreeBSD and Solaris operating systems. [16] A project was started to move Hotmail to Windows 2000. In June 2001, Microsoft claimed this had completed. A few days later they retract and admitted that the DNS functions of the hotmail system were still dependent on FreeBSD. In 2002 Hotmail still ran its infrastructure on UNIX servers, with only the front-end converted to Windows 2000. [17] Development later saw the service tied with the Microsoft Web Authentication schema, Microsoft Passport (now Microsoft account), and integration with instant messaging from Microsoft and social networking programs, MSN Messenger and MSN Spaces (later Windows Live Messenger and Windows Live Spaces, respectively). Security issues in 1999, hackers revealed a security failure in Hotmail that allowed any login to any hotmail account using the 'EH' password. At the moment it was called "the incident more security widespread in the history of the web". [18] In 2001, the hotmail service was committed again by computer hackers who have discovered that anyone could log in to your Hotmail account and then pull messages from any other hotmail account From a URL with a user name of the second account and a number of Void message. It was a simple attack that by the time the patch was made, dozens of newspapers and hundreds of websites published exact descriptions, allowing tens of thousands of hackers running unbridled through hotmail. Exploable vulnerability exposed Millions of accounts to the adulteration between 7 August and August 31, 2001. [19] [20] Competition in 2004, Google announced its own mail service, Gmail. With more storage space, speed and interface flexibility, this new competitor stimulated a wave of webmail innovation. [21] The main heavyweight industry - à € - Hotmail and Yahoo! Mail - introduced upgraded versions of your email services with higher speed, security and advanced features. [22] [23] The new Windows Live Hotmail e-mail system was announced on November 1st of 2005, under the codename "Kahuna", and a beta version was released for a few thousand testers. Other webmail enthusiasts also want to experience the beta version can request access to invitation. The new service was built from scratch and emphasized three main concepts of being "more fastest, simpler and safe." New versions of the beta service were launched on the developmental and, until the end of 2006, the number of beta testers had reached the millions. [24] Hotmail mark was planned to be eliminated in which Microsoft announced that the new email system would be called Windows Live Mail, but developers soon kept after beta-testers were confused with the name change And they preferred the name of hotmail known, and decided on Windows Live Hotmail. After a beta testing period, it was officially released for new and existing users in the Netherlands on 9 November 2006 as a pilot market. Beta's development was completed in April 2007, Windows Live Hotmail was launched for new registrations on May 7, 2007, since the 260 million MSN Hotmail accounts around the world gain access to the new system. The old MSN hotmail interface was accessible only by users who registered before the Windows Live Hotmail launch date and have not been chosen to upgrade to the new service. The deployment for all existing users was completed in October 2007. Windows Live Hotmail was awarded the Choice of PC Journal Editor in February 2007, [25] March 2007, [26] and February 2011. [27] In 2008, it was announced that the service would be updated focused on improving speed, increase storage space, better user experience and usability resources, and That the input and access access speeds by email would have up to 70% ripple. [28] Classical and complete versions of Windows Live Hotmail were combined in the new release. As a result of user feedback, Hotmail has been upgraded so that the scrolling works for users who have the read-panel disabled. I am also expected that the hotmail staff was moving the announcement from the top of the page to the side by adding more themes, increasing the number of messages on each page and adding the ability to send instant messages from the box entry of the user in future releases in future releases. [29] Support for Firefox in the updated Windows Live Hotmail took a few months to complete. In 2009, support for Google Chrome was still incomplete, requesting Chrome developers to temporarily send a browser that employed the user agent spoofing when making requests to the Windows Live website. [30] As part of the update, Microsoft also added integrated capacity to instant messages with contacts in the Windows Live Messenger service. The feature was the achievement of a project that started as "Windows Live Web Messenger" in 2007, a replacement for the outdated MSN Messenger that was first introduced in August 2004. Noticed If the original "Windows Live Web Messenger" featured conversations with guides in a "conversation work space", however, since its integration with Hotmail, this was removed. [31] [32] The research mechanism of the It was integrated with Hotmail in 2009 through the introduction of a "quick add" feature, allowing users to add the search results from Bing in emails. These include images, maps and business listings. [33] "Wave 4" version of Windows Live Hotmail on May 18, 2010, Microsoft revealed Hotmail's "Wave 4" update, which offered features such as 1-click filters, Active displays , inbox scan and 10 GB of photos for photos, Microsoft office book and attachments. [34] He also included the integration with Windows Live Skydrive and Windows Live Office, a free version of the Microsoft Office Web Swine. The new version started its gradual release to all Hotmail users on June 15, 2010 [35] and was completely launched on August 3, 2010. [36] Exchange Support ActiveSync was activated for all hotmail users on August 30, 2010, allowing users to synchronize their emails, contacts, calendars, and tasks for their fault devices that support the protocol. [37] The complete SSL addiction was launched on November 9, 2010. Throughout 2011, Microsoft has added several new features to Hotmail, as aliases [38] and improvements speed. [39] In October 2011, Microsoft revealed a "hotmail renounced" and added many new features, such as instant actions, scheduled scan and categories [40] [41] [41] and this update He started completely launching on November 9, 2011. [43] This update also made SSL enabled by pattern in all accounts. Outlook.com outlook.com, with third-party supplements within a new message Preview Outlook.com was first introduced on July 31, 2012, when its Beta Version was made available to the general public . Existing hotmail clients can update easily to the Outlook.com Premium. Existing Outlook.com Premium Phase on February 18, 2013. According to Microsoft, the update was deployed on April 3, 2013; Users have maintained their existing hotmail accounts and received the option to have @ outlook.com email address. In May 2013, Outlook.com had 400 million active users. [45] In May 2014, Outlook.com continued to have 400 million active users. [46] Transaction for new infrastructures in May 2015, Microsoft announced that it would move the service for what described as an infrastructure based on Office 365. [47] This was followed in June 2015 by the introduction It is through an opt-in view of new features, including new calendar layout options, a filtering service called "clutter" and new theme projects. [48] Microsoft also introduced the capacity of third-party providers, such as PayPal and Evernote to include supplements on the service. [49] In addition, contact suggestions and e-mail updates, such as flight reserves must be introduced in Office 365 subscriber accounts and in January and March outline of 2016, respectively. [50] With the update, users have not been able to use the Windows Live Mail 2012 client to synchronize their e-mail, contacts, and calendar events using the official settings; They were encouraged to see Outlook.com through a web browser, through the email application or through the Microsoft Outlook client. [51] However, Windows Live Mail can be configured to use the IMAP protocol (or the least effective POP3) to search for Mail only. [52] [53] Microsoft concluded this - visualization stage in February 2016, when he began to launch the new version for users' accounts, I walk with the Northern America. [54] [27] Network Outlook.com 2017 Beta on August 8, 2017. Microsoft has launched a new Opt-in Beta Toggle allowing users to test the other changes in E-mail Outlook.com, including A more fast input box, a responsive design and the ability to look for emojis. [55] There was also an introduction of the photo hub, the fifth component of Outlook.com. [56] [best needed photos] On October 30, 2017, Microsoft announced that it would eliminate your "Outlook.com Premium" signature service, which features offered, such as expanded storage and removal of Announcements of the user interface. These benefits were subsequently available to Office 365 subscribers, and Microsoft will not accept further subscriptions for Outlook.com Premium. Existing Outlook.com subscribers can continue to renew year existing subscription. [57] The old interface, which dated 2016 was eliminated in 2019. Advertisement resources for Outlook.com on the basis of a bus similar to other main webmail services, Outlook.com uses programming techniques AJAX and supports subsequent Internet versions Internet Firefox, Safari and Google Chrome. Some of its features include keyboard controls giving the ability to navigate through the page without using the mouse, the ability to search the user messages, including structured query syntax, such as "eBay", message filters, Folder-based, Automatic -Completion of contact addresses to compose, contact the grouping, importing and export from contacts such as CSV files, text formatting Rich, rich text signatures, spam filtering and virus scan, support for various addresses and different language versions. An example of a feature is not present is the ability to create custom domain names. [58] Security and privacy Outlook.com promised to respect the privacy of users, specifically directing Gmail's privacy practices. [59] Outlook.com does not scan e-mails or attachments to advertising information and personal conversations are entirely free of announcements. [60] [61] In March 2014, when former Microsoft Alex Kibkalo employee was arrested for his involvement in 2012 leaking from Microsoft's commercial secrets, Microsoft came under criticism for having accessed the inbox of your French citizens. [62] [62] Critics claim these actions violate the privacy laws [64] [65], as well as promises of Microsoft in relation to the personal information of the users, while others have pointed out that such access is allowed under Microsoft's privacy policies in order to "protect Microsoft's rights or property", [67] [68] which was needed to prevent a crime from intending to have inflicted billions of dollars of damage, and that such action in the Microsoft part is unprecedented in 18 years. [69] In response to criticism, Microsoft announced that it would no longer access the private account information in such cases, but would deliver it to investigation to law application agencies. [70] [71] Outlook.com uses DMARC specifications to provide better security for messaging and extended validation to protect user accounts. [72] On April 17, 2013, Microsoft added two steps check for Microsoft accounts, so by extension to Outlook.com. [73] Outlook also allows a single-use code to be used instead of a usual password by signing a Microsoft account. Each code can only be used once, but one can be requested whenever necessary. If a user is logging in to a public computer - as in the library or at school, the use of a single-use code helps maintain the information of the secure account. The unique use code is sent to the user when prompted during the login. [74] Office for Web Integration The shortcut panel, which connects several Microsoft online services, including Outlook.com Outlook.com integrates with Office for the Web to enable Visualization and e-edition of Microsoft Word, Excel and PowerPoint documents that are connected to e-mail messages. Users can directly open the documents attached to the web browser and save them on your OneDrive. Users can also run editions in any applicable document received and respond directly to the sender with the edited version of the document. In addition, users can also send up to 25 GB of Office documents (up to 50 MB each) using Outlook.com by uploading these documents on OneDrive and sharing these documents with other users to view or collaboration. Users can also save emails to OneNote. [75] Skype Integration A Skype for Outlook.com-Visualization Version has begun to be launching in the UK on April 30, 2013. This feature allows that users do a Skype video call in Outlook.com without using Skpye Desktop Client. [76] Aliases users can create Exclusive additional, call aliases, to your Microsoft account. As of April 17, 2013, users can subscribe with any alias and create up to 10 aliases a year for a total of 10 addresses. For a particular account, all aliases use the same entry, contact list, and account configurations - including password - such as the main address. (When an alias is set defined Users can choose to have all the emails sent to this address to go to the inbox or to a different folder. [77] The emails sent from an alias do not reveal to the recipients that they come from an account with other addresses. Keyboard shortcuts Hotmail.com freeware version provides a list of almost 50 keyboard shortcuts [78] for web users with visual disabilities, blindness or other deficiencies. Mail Mail components is the Outlook.com webmail interface. The default display is a three-speaker display with folders on the left, a list of e-mail messages in the middle, and the message content to the right. The active mailing of the mail allows users to interact directly with contents and functionality in your e-mail message. For example, any photo attachments can be viewed directly using the active display. In addition, the mail provides a partner platform that allows us to contest and functionality of various sites and services such as YouTube, Flickr, LinkedIn and the United States Postal Service to be viewed directly within the email. For example, users can view YouTube video in the mail when a user receives an e-mail that contains a link to the Veho. Other active visualization features include real-time postal service status tracking of the United States postal service and carrying out social networking in LinkedIn or other social networking sites from within the E-Mail. Mail offers a "virtual broom", which allow users to exclude or move a large number of emails into folders specified based on sender's information. Once a "scan" is performed, the user can choose to configure messages to remind the scan settings and perform the same motion or delete actions for any future emails. Users can also configure custom message rules based on the sender or recipient information, the e-mail subject or attachments to the email. There is also an option to delete / move messages that are older than a specified number of days, or only keep the most recent message from a sender. Responsual views allow users to filter all e-mails (on all folders) by document attachments, photo attachments, flagged messages, or shipping updates. A one-click filters allow users to filter the inbox (or the specific folder) based on whether the e-mail message is not or not read, from the service list Service, group discussion lists or a social networking site (La LinkedIn). Categories appear under rappies to facilitate access. Calendar calendar, as seen in 2016 The Outlook time management web application was first released on January 14, 2008 as Windows Live Calendar, and has been updated for launching " Wave 4 " on June 7, 2010. It has been updated with Microsoft's subway design a phased implantation for users of April 2, 2013. [79] Calendar has a similar interface Desktop calendar applications, such as Windows Calendar and supports iCalendar files for users to import calendar entries in their calendars. It uses AJAX technology that allows users to add and drop calendar events from one date to another without recharging the page, and daily, weekly, monthly, and visualization schedule. It also has a task list function for users to accompany their tasks to complete. Calendar events are stored online and can be viewed anywhere. Several calendars can be created and shared, allowing different levels of permissions for each user. The People Outlook Contact Management Service was Known as Windows Live Contacts and before that, Windows Live People. It provides users with access to profiles and information from their contacts, allowing them to share different information with different groups of people. In addition to a block of addresses, people also provide integrated services with social media, such as Facebook and Twitter. [80] The service was re-evaluated to its current name in 2012, introducing a new interface based on the meter design language that had already been introduced with Outlook.com. Contacts are automatically updated in And the service allows the removal of duplicate contact entries when imported with the profile. Users can also set limits on which parts of their contact data can be viewed by others. To make the Main article: Microsoft to do is the Outlook.com task management component introduced during the transition to Office's 365-based infrastructure. Mail Client Access Outlook.com supports email clients connecting through the following protocols, listed in chronological order: WebDAV was used by Outlook Express, but was discontinued on September 1, 2009. [81] [82] Microsoft Outlook 2002 introduced in Microsoft Office XP included integrated support for Outlook.com accounts. [83] Deltysync was used by Microsoft Outlook Hotmail Connector, a free plug-in for Microsoft Outlook 2003, 2007 or 2010. Using the Outlook connector, users can freely access e-mail messages, contacts, and calendar Rivers on any Outlook.com account, although access to tasks and notes requires a premium signature. Another alternative to users is to use the Windows Live Mail desktop client, which had integrated support for hotmail. [84] Post-Office Protocol access 3 (POP3) was available for all hotmail accounts as part of the "Wave 3" version by adding support to access hotmail from any email client to support this protocol. [85] Exchange ActiveSync (EAS) support has been added as part of the "Wave 4" hotmail release, allowing users to synchronize not only their email, but also their contacts and calendar Rivers on any device that supports EAS. [86] On September 12, 2013, the support added by Microsoft for the Internet Internet Access Protocol (IMAP) and AUTH. [87] [88] In November 2019 Microsoft has added the feature to users to have their emails read aloud in the Outlook application. [89] The popularity of the controvlivion with spammers as many free webmail services, hotmail was often used by spammers for illicitric ends such as garbage or unwanted mail and marketing due to wide availability, service popularity of new accounts. [90] Hotmail changed its service contract stating that any account engaging in these activities would be terminated without warning. [91] [92] Requests for contact details The ability to associate Outlook.com accounts with mobile phones or other email addresses was initially announced as an optional feature. [93] However, an update in 2013 required many users to associate their accounts before the site allows them to log in - a refusal that could be avoided using an application, such as Windows Live Mail 2011 or 2012, to access the account instead of web browser (and remains possible to "associate" an account for a use of a user as "disposable", e-mail). [94] Some users also turned messages that their accounts would expire if they continue to use them anonymously. US Government Vigilance Information: PRISM (Vigilance Program) and 2013 Scandal Vigilance in Massos According to Thguardian.com, several Newsletters of the National Secret National Secret National (NSA) indicate that Microsoft allowed the NSA access chats and e-mails in Outlook.com, and implemented a bypass of your announced encryption to facilitate government access. [95] An entry Bulletin of December 26, 2012 shows that Microsoft had "developed a survey capacity to handle" with the intercept of encrypted chats in Outlook.com, within five months after the Service entered public tests. [95] Another entry states that "for prism collection against hotmail emails, live and outlook.com will not be affected because the prism collects this data before encryption." [95] In response to the report, Microsoft has stated, Other things, that "When we update or update products, we are not acquitted from the need to fulfill existing or future legal demands" and that "there are aspects of this debate we wish we were able to discuss more freely."
